

WEMEC

Wireless Enhanced Mobile Emergency Communications

Rapid Deployment Communications

When disaster strikes, communication is stretched to its limits. WEMEC can work behind mobile command center communication systems to provide long-range cordless phones for up to 36 users and the ability to have direct 2-way radio links between handsets. WEMEC units can provide *satellite*, *cellular* and *landline* phone access within a self-contained, portable case for 4 to 36 users. The 2-way radio is independent of the base making it easy for volunteers and officials to communicate at public events and emergencies.
